# CEO'S VISION

“NARA is committed to the sustainable manufacturing of clay. We strive to be a positive change in our industry in minimizing our environmental impact and we pride ourself in committing to developing eco-friendly products, implementing efficient production processes, and inspiring others to adopt the same sustainable practices.”

*Arvuth Charoenwattananon*  
**CHIEF EXECUTIVE OFFICER**

## QUALITY POLICY

### 1. PROVIDE HIGH QUALITY PRODUCTS

**2. ON TIME DELIVERY**

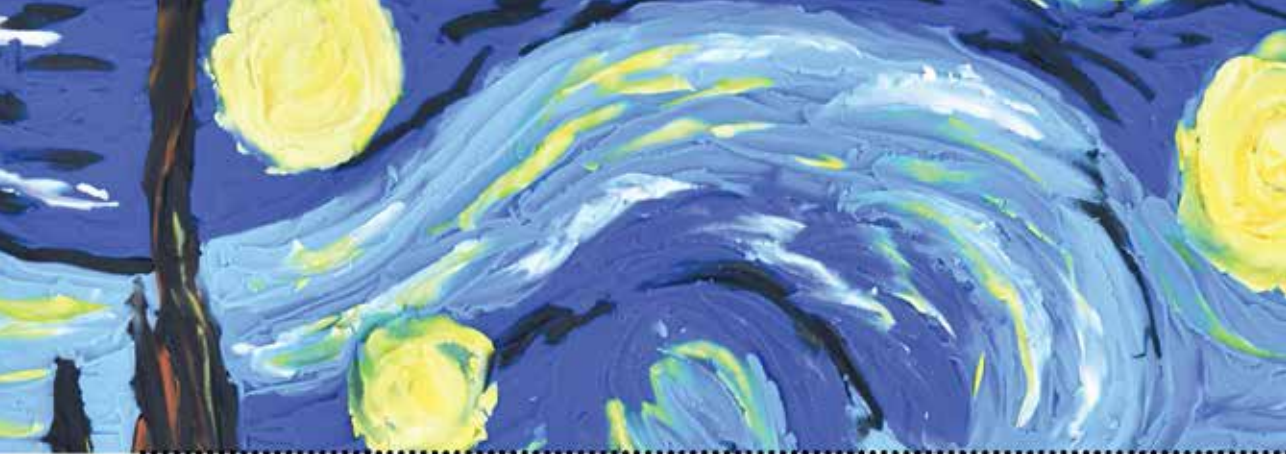

**3. CONTINUOUS IMPROVEMENT  
IN ALL RELATED PROCESSES**

## **MEMBERSHIP**

## **NON - DRYING**

Kids Product: Soft and bright Color  
Professional Product: Durable and strong, can be used for creating a model.  
Never Dries out and never Hardens.

## **AIR-DRYING**

Super soft, Air Drying should be kept in air-Tight Containers.

## **MIXED WITH WATER**

Ready mixed Paper Mache. No glue is needed  
(Only Mixed with water).

## **FIRED**

Ceramic must be fired, 900-1200 °C.  
It is waterproof and durable.

## **BAKE**

Polymer Clay must be baked for 15-30 mins at 90-130 °C  
(Depending on the size and thickness of work)  
It is also waterproof and durable (similar to the characteristics of plastic ) .

## **TOOLS**

Craft Tools are high quality, Multi-purpose tools, for both kids and professional product.

# LET'S GET TO KNOW ME!

## FLOATING CLAY

Oil based modelling material with a lower density than water giving the ability to float.

The finished product can float freely in water and is the perfect choice for bathtub playing.

As it is oil based, Floating Clay will not harden or dry out. After finished playing, the clay can be left out to dry and can be used over and over again.

Its shelf life is approximately 3 years.

## LIGHT CLAY

It is a super soft air-drying modelling material.

It is self-hardening and dry out naturally. Once dried, the figure will hold its shape permanently. The clay itself is light weight.

Light clay needs to be kept in airtight storage in order to remain soft and not dry out. Water can be added in small amounts to reactivate the clay. Its shelf life is approximately 1.5 years.

## BASIC COLOURS :

## PASTEL COLOURS :

## SPECIAL TIPS

1. Keep unused NARA Light clay in an airtight container to prolong the life of clay.
2. Add a few drops of water to increase the clay softness.
3. Wash your hands after used.
4. After finished, please keep your masterpiece in a dry place.

## FOAM CLAY

Foam based modelling material contains small foam beads that gives an interesting and unique texture. It is water based and air-drying, therefore the finished piece will hold its shape after being left to completely dry.

Foam Clay needs to be kept in an airtight storage in order to remain soft and to avoid it from drying out. Its unique feel is what sets it apart from any other modelling materials. While active, it can stick to itself and any surface without glue. Its shelf life is approximately 1.5 years.

**BASIC COLOURS :****NEON COLOURS :****PASTEL COLOURS :****"SPECIAL TIPS"**

## SAND CLAY

SAND CLAY is the original squeezable play sand kids love! Made from real sand. It's a kind of air drying material. Fluff it and feel it flow through fingers like slow-moving liquid! Sand clay is Non-toxic. It sticks only to itself and not yourself or your clothes, making for an easy clean up.

Sand clay is an educational and sensory toy kit, where kids can make whatever they wish! Pack it, pull it, shape it, cut it, mould it and love it! Enjoy the feeling as it flows through your fingers. Put sand clay back after used to prevent from drying out. This sand is a way to relax and de-stress for all ages. No matter how you play with it, whether molding it, cutting it, of letting it flow through your fingers, it is a great way to relax and can be used as a fidget toy.

## SLIME

Slime is very soft and not sticky to your hands and clothes. You can stretch, fold, twist, spread as you like. Slime for kids is not only bring hours of fun to your child, but also relief the stress and lead your child to feel relaxing.

Slime can be paired with some of your favorite beads, sequins, accessories, etc.

Children can create any shapes what they want, which helps to develop children's manual production ability and imagination. Slime is non-toxic, safe for the children. Put the slime back in the bottle and cap after use to prevent the slime from drying out.

## PAPER MACHE

Made of paper pulp and built in glue. It is easy to use, just mix the Paper Mache and water in a 3:1 ratio. The advantages of using Paper Mache are to achieve a nice textured look.

Acrylic or poster paints can be applied after it dries out to perfect the look of the finished product. The pure paper pulp does not contain any traces of ink, since it is not made from recycled paper. Therefore, it is completely safe for children.

Its shelf life is approximately 2 years.

## AIR-DRY CLAY

Air dry clay does not require baking or firing in a kiln. It dries and hardens naturally when exposed to air, making it a convenient and accessible option for artists and crafters.

There are 2 different types of

- Hard & Strong.
- Flexible.

# AIR-DRY CLAY (HARD & STRONG)

Hard & Strong. The Hard & Strong formula becomes tough and rigid once it dries. This makes it a great choice for creating sculptures or art pieces that requires a lot of details and needs to hold its shape.

Tip: Shaping wire to form a skeleton before adding air dry clay on top can help increase structural integrity and avoid shrinkage.

## AIR-DRY CLAY (FLEXIBLE & TRANSPARENT)

Flexible. The Flexible formula becomes slightly bendable once it dries. When sculpted into thin pieces, it become translucent and is able to flex a little bit even at full hardness. This makes it a great choice to sculpt flowers or foliage as the clay will remain strong and flexible even when rolled out into thin petals.

Tip: Once dried, the flexible air dry clay can be painted with water color to add details very easily as its translucency will take on colour very well.

## POLYMER CLAY

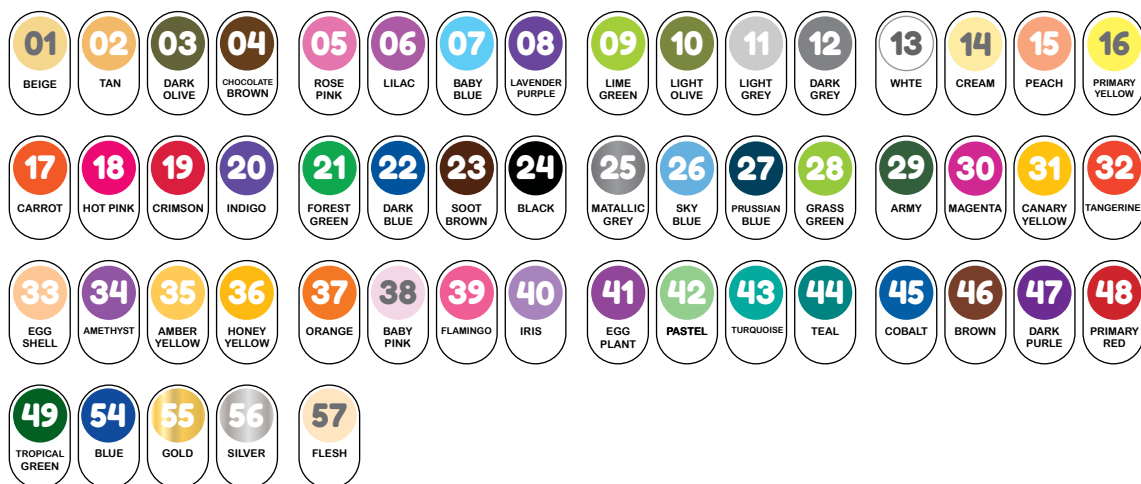

The “make and bake” clay hardens after baking it in an oven about 15-30 minutes (depending on the size of the project) at 130°C (265°F). After baked, it will completely harden and hold its shape. It can be painted with ink or acrylic paint. It is ideal for sculpture and jewelry making. The clay will require some conditioning as it will be very hard and tough initially. You will need to knead it until it becomes soft and workable, a roller or a pasta machine may be used in softening the clay.

Its shelf life is approximately 2 years.

## BASIC INSTRUCTION

1. Create your own design.
2. Wash hands with soap and water before and after using NARA Polymer clay.
3. Choosing the desired colour and knead in your hands until it is warm and easy to work with.
4. Shape the clay into your chosen design.
5. Put the finished shape into an oven and bake at 130°C (265 °F) for 15 to 30 minutes. The baking period may vary depending on the size of the model. Do not put any accessories into the oven.
6. Leave your creation cool down and use sandpaper to remove any rough area. Painting with acrylic colours can be done (if needed).

### RECOMMENDATION FOR USING :

- Can be used as a coating to achieve a epoxy resin-like finish.
- Use for “drawing” with clay and detailing miniature pieces.
- Can be colored with alcohol-based inks before baking.
- Can be used to bond pieces of clay together, before or after baking.
- Strong and flexible after baking-making perfect for jewelry, scrapbook and home decor.

### INSTRUCTION:

**Bake at 140°C (284°F) for 20-30 minutes (depends on the thickness)**

**Do not microwave**

**Do not exceed recommended time or temperature**

## CERAMIC CLAY

It is a heavy - weight modelling material that comes from the earth. Often used in the making of ceramic pieces, the finished product needs to be fired in a kiln at 1,000-1,200°C. Ceramic Clay does dry if it is left out in the air.

To reactivate the clay, just add water to moisten the dry section and resume constructing your masterpiece.

Ceramic Clay needs to be kept in airtight storage in order to remain soft and not dry out. Its shelf life is approximately 1.5 years.

**SPECIAL TIP :**

NARA CERAMIC CLAY should be kept in an airtight storage in order to remain soft.

**RECOMMENDATION FOR USING :**

- Knead and shape.
- A finished product needs to dry up within 24 hours on open air in a normal temperature without shrinking or bending.
- The finished product can be painted and vanished.
- To get porcelain, it must be fired at 1,000-1,300 °C (or 2,012-2,192 °F)

## SCULPTURE CLAY

A smart choice for professional sculptures and model makers. The clay's density is very high and is amazing at achieving very fine details. It is an oil based modelling material meaning it will not dry out after being left in the air and can be worked over again and again.

It is perfect for prototyping, Its shelf life is more than 3 years.

# BASIC COLOURS :

## LET'S GET TO KNOW ME
